

EVERYDAY AI TOOLS THAT ENHANCE YOUR LIFE

You don't need to be a tech expert to use AI. Whether you're designing, researching, or just trying to keep up, these tools help bring order to your everyday chaos.

The image displays the Papercup interface on a purple background. On the left, a video player shows a cooking scene with a person in a white chef's coat. Above the video, a chat bubble says 'Please can you make the above changes?' and below it, another bubble says 'I've reworked the translation on that section now'. On the right, a woman with long red hair is smiling. Overlaid on the interface is an orange box containing a '55%' progress indicator, a waveform, a Spanish flag, and the Papercup logo. At the bottom, an orange banner reads '👉 Best for: Multilingual content creators'.

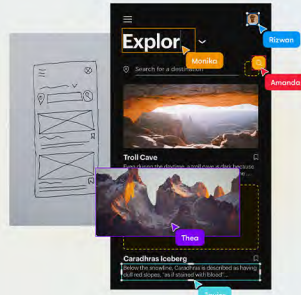

PAPERCUP

[Visit Papercup](#)

Turn your videos into multilingual content with AI-powered dubbing and subtitles. Papercup helps you reach new audiences by translating and voicing your videos — no need for voice actors or editing tools.

uizard

The easiest and fastest tool to design your ideas

Best for: Non-designers building apps or sites

UIZARD

[Try Uizard](#)

Sketch an app or website idea and watch Uizard turn it into a real design. It's a fast and simple way to build wireframes and mockups — no design skills required.

Search anything you've seen, said, or heard

Okay, yes I found the ticket here. It's 1547. Yea this is the one that was related to relaunching the middle-out compression daemon for the time series data right?

Um yea. Yea that's the same was talking about.

I think what needs to happen is to need to XOR the new value for the time series right for it to be fairly optimized processor instruction set.

Yea I think you're right. Okay so I'll assign you to that ticket. What do you think it is a medium size?

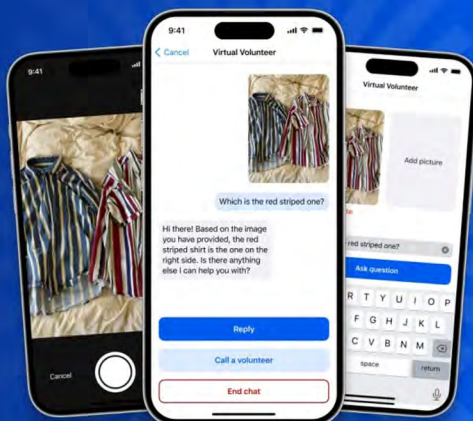

Let's start with that and I'll go. It could be a bit more to page the new data into the timeline controller.

Best for: Anyone who want to search their computer memory log

REWIND

[Learn More](#)

Rewind records everything on your screen (privately), so you can search your digital history like a personal memory log. Find what you saw, read, or heard in seconds.

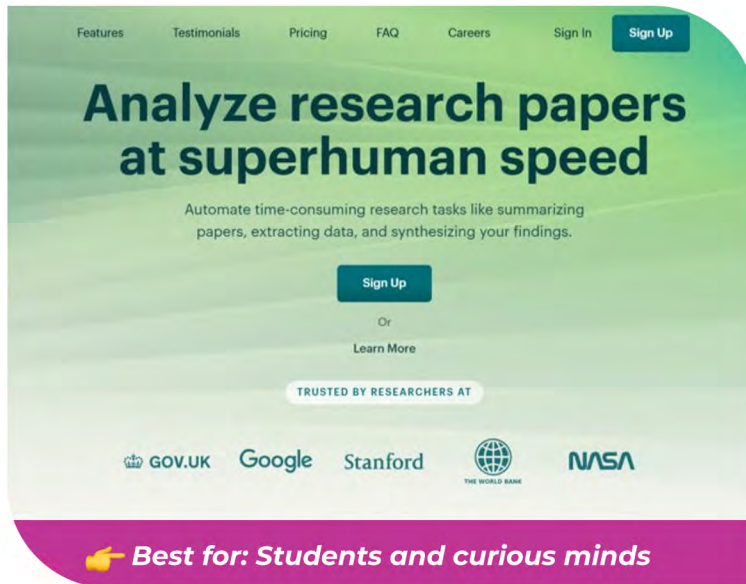

Best for: Everyday accessibility and object recognition

BE MY EYES (AI MODE)

[Explore Be My Eyes](#)

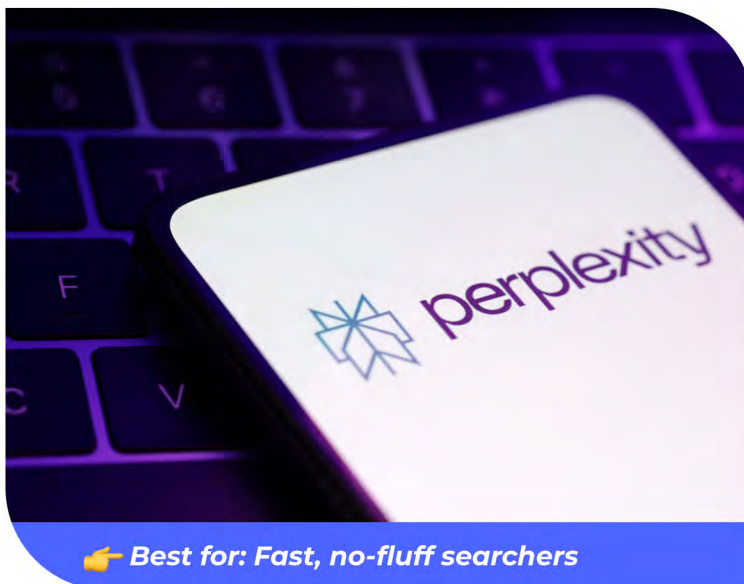

This app describes what your phone's camera sees using AI — ideal low-vision users. It reads labels, identifies objects, and offers visual support instantly.

ELICIT

[Visit Elicit](#)

Elicit helps you do research faster by finding and summarizing academic papers using AI. Ask questions, compare findings, and understand topics without digging through pages of PDFs.

PERPLEXITY AI

[Try Perplexity AI](#)

Perplexity is like a smarter search engine that gives direct, clear answers with sources. No ads, no fluff — just accurate results when you need them.

New tools, zero jargon, all real-life use.

AI DOESN'T HAVE TO BE COMPLICATED. THESE TOOLS PROVE IT.
